

SAER
ELETTROPOMPE

*National
Rotating
Equipment*

SAER has the fastest growth rate in Europe and is the leading pump manufacturer in its field. They are widely recognized as a specialist supplier of centrifugal and submersible pumps. These pumps are tested in one of the finest testing laboratories in Europe and come fully certified. They have a legacy spanning more than 50 years.

SAER retains all of its production in Italy. This differs from competitors who have transferred production to the East or who are importing Chinese and Indian products and passing them off as products manufactured in Europe. With 4 production facilities totaling over 100 000m² and a further 25 000m² under construction, SAER defends quality and high precision European manufacture.

PUMPS

SAER manufactures pumps from 0.5 HP to 400 HP. Pumps can be supplied in 4 different metallurgies. Cast Iron, Carbon Steel, Marine Grade Bronze and Stainless Steel, covering all applications like Domestic, Industrial, Firefighting, Irrigation, etc. These would include: Electric Single Impeller Centrifugal Pumps. Electric Centrifugal Pumps with Two Opposite Impellers. Submersible Pumps from 4" up to 14".

Single Stage Monobloc Centrifugal Pumps.

Bareshaft End Suction Centrifugal Electric Pump (UNI E 733).

Peripheral Electric Pumps.

Inline Vertical Multistage Pumps.

Electric Centrifugal Multi Stage Pumps.

Electric Self Priming Pumps.

Horizontal Multistage Centrifugal Pumps.

Sewage Pumps.

MOTORS

One of the main SAER products is Submersible Pumps and Submersible Motors.

With a complete range of Submersible Pumps starting from 4" to 14", SAER is a complete solution provider in this type of product line. In the most sophisticated manufacturing plants SAER manufactures highest quality Submersible Motors coupled with SAER submersible pumps (and other brands of Submersible pumps worldwide). SAER manufactures motors from 4" to 12" which cover from 0.5 HP to 400 HP. This range of Submersible Motors makes SAER a leading supplier of Submersible Motors. All these motors are manufactured in 4 metallurgies: Cast Iron, Bronze, Carbon Steel and Stainless Steel. All SAER motors are completely re-windable. The oil filled 4" and 6" motors manufactured by SAER are Oil Filled, Non-toxic oil (USA FDA, US Pharmacopoeia/National Formulary, USDA, European Pharmacopoeia approved)

WATER FILLED MOTORS

6". 10". 12"

SAER understands the difficulties surrounding various applications and for this reason uses the highest material quality for the Shaft: Stainless Steel AISI 431. This gives an edge over the majority of other manufacturers which use lower grades of Stainless Steel like AISI 410 and AISI 420. The motor thrust bearings are manufactured in-house by SAER and are of premium quality. A triple seal system is used on the rotor shaft; bi-directional mechanical seal with radial seal and sand guard with laminar seal. SAER Submersible Motors are also suitable for use with Variable Frequency Drives. All the motors manufactured by SAER are 100% tested in the most advanced testing laboratory. All the tests are recorded and the test reports available to the customer on request. SAER Submersible Motors are supplied all over the world and in the recent past has been used in varied applications like Mining Operations and Marine Applications. SAER has been recommended by prestigious consultants and contractors all around the globe.

NEW PRODUCTS

- * Submersible Pumps and Motors from 4" up to 14" and in 2011 up to 20" with duplex and super duplex version too.
- * Normalized surface Centrifugal Pumps EN 733 with delivery up to 2000 m³/h.
- * Booster sets
- * New series Vertical and Horizontal Multistage Pumps in Stainless Steel 304 or 316
- * Split casing pumps up to 4500 m³/h.
- * Multistage pumps up to 64 bar and 700 m³/h.
- * Horizontal Electric Motors up to 200 kw.
